

Inspections and Reportings

HF experts inspect the actual situation of your machine under production. A detailed report provides information on the current status of the machine and informs about possibilities for repairs & upgrades.

Maintenance and Preventive Maintenance

Technical experts from HF re-work your machines with special tools directly on site.

- Mechanically
- Electrically
- Software

Spare Parts and Services

- We guarantee to supply your machines with spares for many years
- Essential wear parts are mainly manufactured by HF
- These quality parts are designed for a long-lasting and high performance operation

If you need any help with spare parts, please contact our service team!

Express Workshop

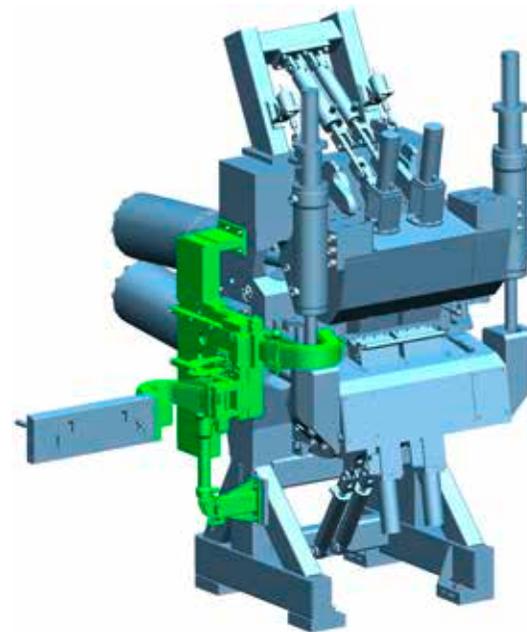

Repair of HF components and assembly groups at local HF workshops. You get a failure/damage report and we provide a repair concept if possible.

Upgrades

Technology from our most recent machine designs can be made available for your existing HF machine.

Example: Installation of “cranked” cassette arms to reduce down time during the pre-former change. There is no need to open the vertical locking cylinders to change the pre-formers.

Training

Well trained staff is essential for the safe operation of a plant and long lifetime of the machines. In order to prepare the staff in the best possible way, we have developed different types of training:

In-house training

- Maintenance training
- Operator training

On-site training

- Operative training
- Maintenance training on your machines
